```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(GENE-) GENE LOGIC INC.

Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

Claim 1; SEQ ID NO 1043; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by by Abh chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of Gs is indicative of GCA. modulating (M2) GA by contacting GC with an agent that alters the cappelaid of at least one gene in Gs; (2) Screening (M3) for an agent cappale of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression confidence in a lergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of carbogen or sterile inflammatory disease, by detecting the level of carbogen or sterile inflammatory disease, by detecting the level of carbogen or sterile inflammatory disease, by detecting the level of carbogen or sterile inflammatory disease, by contacting a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene (s) from Gs in the tissue. M1 capponse in a subject, exposure of a subject to a pathogen or sterile inflammation in a tissue; M4 is useful for detecting an inflammation of a subject to a pathogen or sterile inflammatory disease, conditions in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease, or cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease, also bacterial infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially controved in gramulocytes. Note: The sequence data for this parent did one form part of the printed specification, but was obtained in cftp. with a parent directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300

The present invention describes an isolated epitope (I) and an epitope cluster. Also described is a vaccine or immunotherapeutic composition (VO) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. WC is also useful for evaluating immunopenicity of a vaccine or immunotherapeutic composition, by administering VC to an HLA-transpenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a T cell and evaluating immunogenicity. (I) is useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises Eliseput analysis, confiniting dilution analysis, flow cytometry, in situ hybridisation and/or polymerase chain reaction (PCR). AB0838843 to AB083888 and ABP74128 to ABP74133 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

epitope cluster comprising the polypeptide. Also disclosed is a vaccine or immunotherapeutic composition containing an epitope of the invention. Compositions of the invention may be used in the treatment of cancer. The method can be combined with a radiation therapy, chemotherapy.

Dischemotherapy or surgery. The composition is also useful for evaluating immunospanicity of a vaccine or immunotherapeutic compound. Multimeric MHC immunospanicity of a vaccine or immunotherapeutic compound. Multimeric MHC response, by performing the method is useful for evaluating immunological response, by performing the method prior to and subsequent to an immunisation step. Compositions of the invention are useful for diagnosing a disease. The current sequence represents an epitope of the invention with high affinity for MHC class I.

                                                                                                                                                                                                                                                                                  This is the nucleotide sequence of a newly isolated human SSX4 cDNA clone. The CDNA was isolated from a human testicular cDNA by PCR amplification using primers (see AAV70062-63) based on the known SSX2 sequence. A SSX5 clone (see AAV70061) was also obtained. 2 Forms of SSX4 were identified. One of these lacked nucleotides 331-466 but was otherwise identical to the present SSX4 sequence and is described as an alternatively spliced form. SSX4 shares 89.4% homology to SSX1 on the nucleotide level and 79.3% at the amino acid level. The inventional additionally provides expression vectors, transferred cells that can be used to produce SSX proteins, and primers (see AAV70062-73) useful for determining expression of an SSX gene in a sample. The

the translocation t (X;18) (p11.2;q11.2) found in human synovial sarcomas, involving joining of the SYT gene (AAT11778) on chromosome-18 at 18q11.2 to SSX2. The gene fusion is then transcribed to produce an SYT-SSX2 (AAT11781) fusion transcript and translated into a fusion protein. SSX2 may be distinguished from related sequence SSX1 (AAT11779) by digestion with Smar and LSPI. Parimer AAT11784 has been used in polymerase chain reaction amplification of SX2 sequences. Detection of the gene or its product in an abnormal location or as a fusion may be used in diagnosis of synovial sarcoma, using primers, probes, humanised antibodies, monoclonal antibodies, etc. Antisense oligonucleotides and antibodies may also be used therapeutically, and antitumour recombinant vaccines may be constructed e.g. in a vaccinia virus vector

The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I). Treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein (MSP) or, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating concepanic fusion protein, treating cancerous cells containing fusion concepanic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP) 90 (e.g. protein isoform in a patient heterozygous for (II). The method is useful CC protein isoform in a patient heterozygous for (II). The method is useful (I ymphoma, chronic myeloid leukaemia (CML), ALL, ALL, ALL, ALL, and CMML, or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewings sarcoma and carcinoma, Ewings sarcoma, rheadomy carcinoma, the method is also useful for treating viral carcinoma. This represents the DNA sequence of a chromosome aberration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for diagnosing colon cancer in a subject which comprises identifying colon cancer-associated polypeptides as antigens that elicit immune response in colon cancer. The method is useful for diagnosing, determining onset, progression, or regression of colon cancer in a subject, or for selecting a course of treatment of a subject having or suspected of having colon cancer. The colon cancer-associated polypeptides are useful as markers for diagnosing colon cancer, and for following the course of treatment of colon cancer. The present sequence is human colon cancer-associated polypeptide gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        331
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      391
                                                                                                                                                                                                                                                                                                                                                             cluster. Also described is a vaccine or immunotherapeutic composition (VC) comprising (I). (I) has cytostatic activity. VC is useful for treating an animal, by administering to an animal the vaccine or immunotherapeutic composition. VC is also useful for evaluating immunotherapeutic composition. VC is also useful for evaluating administering VC to an HiA-transgenic animal and evaluating immunogenicity based on a characteristic of the animal, or by in vitro primary stimulation of a Teal and evaluating immunogenicity to determining specific T cell frequency, by contacting T cells useful for determining specific T cell frequency, by contacting T cells with a MHC-peptide complex, and further comprises ELISPOT analysis, limiting dilution analysis, flow eyrometry, in situ hybridisation and/or polymerase chain reaction (FC). Ago33658 and ABP74128 to hybridisation of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated epitope (I) and an epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           272 CTAGGTTTCAAGGCCACCCTCCCACCTTTCATGTGTAATAAACGGGCCGAAGACTTCCAG

The invention relates to an isolated epitope polypeptide that has high affinity for major histocompatibility complex (MHC) class I, and an epitope cluster comprising the polypeptide. Also disclosed is a vaccine or immunotherapeutic composition containing an epitope of the invention. Compositions of the invention containing an epitope of the invention. Compositions of the invention may be used in the treatment of cancer. The method can be combined with a radiation therapy, chemotherapy, biochemotherapy or surgery. The composition is also useful for evaluating immunogenicity of a vaccine or immunotherapeutic compound. Multimeric MHC cell frequency. This method is useful for determining specific T cell frequency. This method prior to and subsequent to an immunosition step. Compositions of the invention are useful for diagnosition and inhigh affinity for MHC class I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

designated HOM-MEL 40. It was isolated using a novel method in which a designated HOM-MEL 40. It was isolated using a novel method in which a central library proped. From malignant melanoma and expressed in E. collicated to remove interfering binding partners. This involved contacting the sample with lysates of untransfected host cells and with host cells transformed with the same vector (phage lambda) used to make the CDNA library. The method, termed serological fishing, can be used to detect antigens in human tissues, esp. tumour cells, which are useful in the molecular diagnosis of diseases and/or for immunotherapy and gene therapy of infectious, autoimmune and malignant diseases (see also AAT4744-49). HOM-MEL 40 is expressed in 50% of melanomas, 20% of prostate cancers, 20% of present cancers, 20% of breast cancers, but not in normal tissue. HAA-A2 positive tumour cells present a nonomer (see also AAW09449-52) derived from HOM-MEL, suggesting that HOM-MEL 40 specific vaccines, useful in inducing
                                                                       Novel method of serological fishing - allows isolation of molecules (esp. antigens) associated with pathological conditions, e.g. Hodgkin's disease, cancer or auto:immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cytotoxic T lymphocytes, are possible
                                                                                                                                                                                Claim 31; Page 29; 44pp; English

Clone HOW-WEL-40 was isolated from a human malignant melanoma cDNA library using a method, designated serological fishing, designed to library using a method, designated serological fishing, designed to identify immunoreactive markers of disease. In this method, cells characteristic of a disease are used to prepare a cDNA library for transformation of eukaryotic or prokaryotic cells, and the cells grown to prepare the library, but not transfected, to remove any components reactive with these cells, then the stripped sample is similarly treated with laysate of the library cells, so that specific components in the sample may bind to the expression protein. Proteins that form cimputates are identified as disease markers. In the case of HOM-MEL-40, the new melanoma associated antigen is strongly expressed in melanoma, but not healthy tissues. The deduced amino acid sequence includes 3 tumour-associated peptides (see AAW41587-89) that bind to HLA-A2.1. The serological fishing method was also used to identify a claimed marker (see AAV04262) of Hodgkin's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid and derived protein are markers for Hodgkin's disease - used in identifying immuno:reactive markers of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          158
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 218

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancrealic cancer, adenocarcinoma, carcinoma, cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTAGGTTTCAAGGCCACCCTCCCACCTTTCATGTGTAATAAACGGGCCGAAGACTTCCAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 ATGAACGGAGGCGACGCCTTTGCAAGGAGACCCAGGGATGATGCTCAAATATCAGAGAAG

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 comprises a sequence (S) selected from 847 sequences (given in ABL61664 cortivity and can be used in the incoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the adata ollected with respect to the anti-neoplastic agent. M1 can be used in the treatment of cancer such properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, aenocarinoma, carcinoma, cancer, infiltrating ductal cancer, infiltrating lobular cancer, sequence cancer, infiltrating ductal cancer, infiltrating lung, secondary papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 ATGAACGGAGACGACGCCTTTGCAAGGAGACCCAGGGATGATGCTCAAATATCAGAGAG

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of siees expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                    GAACATGCCTGGACCCACAGACTGCGTGAGAGAAAACAGCTGGTGATTTATGAAGAGATC 638

polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did ont appear in the printed specification, but was obtained in flow wipo.int/pub/published_pct_sequences

Patent No. 5698396

GENERAL INFORMATION:
APPLICANT:
PITLE OF INVENTION: Method For Identified Thereby
ITILE OF INVENTION: And Molecules Identified Thereby
NUMBER OF SEQUENCES:
ADDRESSE: Falfe & Lynch
STREET: 805 Third Avenue
CITY: New York City
STRIE: New York
ZIP: 10022
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette, 3.5 inch, 360 kb storage
COMPUTER: IBM
